

LOGAN SMITH

Orlando, FL | (305) 984-6021 | logansmithnyan@gmail.com

SECURITY CLEARANCE: ACTIVE SECRET (Jan 2025 – Jan 2030)

PROFESSIONAL SUMMARY

Software Test & Automation Engineer with an Active Secret Clearance and a proven track record of designing automated testing frameworks for complex DoD training tools. Expertise in drastically reducing test execution time, developing CI/CD pipelines, and engineering custom data analytics dashboards for stakeholder visibility. Strong foundation in C++, Python, and complex systems architecture within 3D simulation environments (Unreal Engine 5).

TECHNICAL SKILLS

- **Test Automation & QA:** Python 3, Selenium, Cucumber (Gherkin), Behave, BDD, Manual/Automated Testing, Xray, Zephyr.
- **Data & Analytics:** Power BI, DAX Language, JQL, Jira, Confluence, Custom Dashboarding.
- **Engineering & DevOps:** C++, Agile/Scrum, Git, Bitbucket, Perforce, Bamboo (CI/CD).
- **Simulation & Architecture:** Unreal Engine 5 (C++/Blueprints), Systems Optimization, Tool Development.

PROFESSIONAL EXPERIENCE

Cole Engineering, Inc. (A By Light Company) | Orlando, FL *Test Engineer 1* | Jun 2024 - Present

- **Automation Leadership:** Pioneered the test team's adoption of test automation by engineering a robust framework from scratch utilizing Python, Behave, BDD, and Gherkin.
- **Efficiency Gains:** Significantly reduced test execution time for critical test cases by **over 75%** (from 6m 26s manual execution to 1m 26s automated), integrating the solution with Bamboo and Cucumber for continuous integration.
- **DoD Compliance:** Designed and executed manual and automated test cases for a highly complex training tool under DoD contract, ensuring strict adherence to government specifications and high quality deliverables.
- **Data Analytics & Visibility:** Leveraged advanced JQL queries to develop custom live dashboards in Jira and Confluence, enhancing visibility into test progress and defect trends for stakeholders.
- **Performance Reporting:** Optimized insights on testing metrics by architecting specialized Power BI dashboards using DAX, ensuring precise adherence to specific government reporting standards.

TECHNICAL & SYSTEMS ENGINEERING PROJECTS

Lead Systems Developer | **OFF AIR** (C++ / Unreal Engine Simulation) *Duration: 4 Months* | *Team Size: 5*

- **Systems Architecture:** Engineered localized impact registration systems, utilizing C++ and complex state modifiers to simulate physical interactions within a 3D environment.
- **AI & Behavioral Logic:** Developed event-driven state machines and behavioral triggers to control autonomous AI entities and complex interaction models.
- **Kinematic Systems:** Designed and implemented advanced player kinematic movement and animation controllers.
- **Workflow Optimization:** Developed custom internal tools utilizing Editor Utility Widgets to streamline workflows and improve team efficiency.
- **Performance Tuning:** Conducted rigorous performance profiling and optimization of sub-systems to maintain high fidelity and stable frame rates.

EDUCATION

Full Sail University | Orlando, FL *Bachelor of Science* | Aug 2022 – May 2024
